

IN THE CLAIMS:

Please amend the claims as follows:

1. - 15. (Canceled)

16. (Currently Amended) An optical component for a light-emitting element comprising:

a transparent body having a reflective plane and a curved reflective surface which
faces said reflective plane;

a projection provided at a center of said reflective plane; and

a recess, provided on said curved reflective surface, into which ~~said~~ a light-emitting
element is inserted;

wherein said curved reflective surface except said recess is covered with high
reflective material, and

said reflective ~~surface~~ plane reflects incident light directly from a light-emitting
element and passes the light reflected by said curved reflective surface
through.

17. - 24. (Canceled)

25. (Currently Amended) The optical component of claim 16, ~~wherein comprises the
optical component, the optical device~~ further comprising:

a light-emitting element,

wherein said light-emitting element is inserted in said recess, and

wherein said optical component and said light-emitting element are integrated by

transparent resin that fills a space between said optical component and said
light-emitting element.

26. - 37. (Canceled)

38. (Previously Presented) The optical component according to claim 16, wherein a
Fresnel lens shaped pattern is formed on said curved reflective surface.
39. (Currently Amended) An optical component array in which a plurality of optical
components according to claim ~~[[16]]~~25 are arranged.
